

SUPER EVAPORATIVE COOLING TEXTILES

SOAK IN WATER
Just soak in water for one minute.

GENTLY SQUEEZE OUT EXCESS WATER

ENJOY IMMEDIATE COOLING

The INUTEQ-PVA® evaporative cooling technology is a highly absorbent Polyvinyl Alcohol Fabric.

Products created from this fiber are activated by soaking them in water for one minute. After squeezing out excess water they are ready for use.

- Will cool you down for several hours.
- Machine washable
- Have antibacterial properties.

Using the INUTEQ-PVA® evaporative cooling towel is a fast and easy way to beat the heat and stay fresh and cool at work, during sports and at leisure.

Activation is easy. Before the first use soak the towel in warm water for one minute and let it dry completely. Then soak the towel again in clean water for one minute and gently squeeze out any excess water. Your towel is now ready for use. For storage, keep your towel in the special storage tube.

**It can be stored damp or hung to dry. The towel becomes stiff when it is dried completely.*

Available in:

Colors:	Blue	Art. nr.: 1530010300
	Orange	Art. nr.: 1530010500
	Yellow	Art. nr.: 1530010700
	Green	Art. nr.: 1530010600
